growth New human monoclonal antibody that binds to platelet-derived factor-D (PDGF-D), useful for treating chronic and recurrent diseases, such as inflammation, autoimmunity and cancer.

Disclosure; SEQ ID NO 49; 255pp; English.

The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0.99 arising in the conditioned medium obtained when HEK293 cells are transfected with the plasmid pCEP4/Sec-30664188. This sequence corresponds to a protein used in the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ઠ
                                                                                                           ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet derived growth factor-D (PDGF-D) were

The invention, relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0.99 arising in the conditioned medium obtained when HEK293 cells are transfected with the plasmid pCBP4/Sec-30664188. This sequence corresponds to a protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 EIVLTQSPGTLSLSPGERATLSCRASQSVSSSYLAWYQQKPGQAPRLLIYATSSRATGIP

The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Autibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0.99 arising in the conditioned medium obtained when HEK293 cells are transfected with the plasmid pCEP4/Sec-30664188. This sequence corresponds to a protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    EIVLTQSPGTLSLSPGERATLSCRASQSVSSSYLAWYQQKPGQAPRLLIYATSSRATGIP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
```

The present invention describes an antibody or its binding fragment that binds platelet derived growth factor-DD (PDGF-DD), where the antibody is useful in preparing a medicament for treating nephritis. Also described:

(1) a method of detecting nephritis; (2) a method of treating nephritis; (3) a method of inhibiting menangial cell proliferation; and (4) a method of treating mesangial cell proliferation; and (4) a method of treating mesangial proliferative glomerulonephritis. The antibody has nephrotropic, antihiflammatory, dermatological, immunosuppressive and antidiabetic activities, and can be used in gene therapy. The antibody or its binding fragment, that binds PDGF-DD, can be used in preparing a medicament for treating nephritis and related disorders, e.g., mesangial proliferative glomerulonephritis. The present sequence represents a human monoclomal antibody (mAD) variable region sequence, which is used in the exemplification of the present invention.

The present invention relates to interleukin-17 (IL-17) antagonistic antibodies suitable for use in the treatment of IL-17 mediated diseases and disorders. A claimed IL-17 binding molecule is capable of inhibiting the activity of 1 nM human IL-17 binding molecule is capable of inhibiting the activity of 1 nM human IL-17 and interleukin-6 production induced by the activity being measured on interleukin-6 production induced by comprises: a heavy chain variable region (DR) ABE73686-ABE7368 (Comprising complementarity determining regions CDR1, CDR2 and CDR3 ABE73686-ABE7369 from anti-human IL-17 antibody AIN457; and a light chain variable region (LH) comprising CDR1, CDR2, and CDR3, CDR2, ABE73689 from anti-human IL-17 antibody AIN457; and IL-17 binding molecule is preferably comprising a first domain having amino acid sequence homology. It preferably comprises at least one antigen binding site comprising a first domain having amino acid sequence homology to the AIN457 VL region ABE73695. Also provided are a DNA comprising a first domain having amino acid sequence homology to the AIN457 VL region ABE73695. Also provided are a DNA construct encoding the IL-17 binding molecule by culturing a transformed host cell line. The construct encoding the DNA construct, and a method of producing an IL-17 binding molecule by culturing a transformed host cell line. The creatment of an IL-17 mediated disease or disorder, especially osteoarthritis, rheumatoid arthritis, osteoporosis and other inflammatory architic is engineered to express the human IgG/kappa repertoire instead of the murine immunoglobulin repertoire, was used to generate antibodies to human IL-17. B-cells from these mice were immortalized by standard hybridoma technology and murine hybridoma cells were obtained else secreted the human IgG1/kappa antibody AIN457. The present sequence is the amino acid sequence of AIN457 VL.
                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel interleukin-17 binding molecule capable of inhibiting human IL-17 activity and IL-6 production induced by human-IL-17 in human dermal fibroblasts, useful for treating IL-mediated diseases e.g. osteoarthritis.
                                                                                                                                                                                                                                                                                                       Jeschke M, Rondeau J;

Novel interleukin-17 binding molecule capable of inhibiting human IL-17 activity and IL-6 production induced by human-IL-17 in human dermal fibroblasts, useful for treating IL-mediated diseases e.g. WPI; 2006-145760/15

Example 3; Page 43-44; 76pp; English.

osteoarthritis.

The present invention relates to interleukin-17 (IL-17) antagonistic antibodies suitable for use in the treatment of IL-17 mediated diseases and disorders. A claimed IL-17 binding molecule is capable of inhibiting the activity of 1 mM human IL-17 binding molecule is capable of inhibiting the activity of 1 mM human IL-17 a concentration of less than 5 mM by 50%, the activity being measured on interleukin-6 production induced by human IL-17 in human dermal fibroblasts. The IL-17 binding molecule comprises: a heavy chain variable region (VH) comprising complementarity determining regions CDR1, CDR2 and CDR3 ABF73686-ABF7368 or CDR1-x, CDR2 x and CDR3-x ABF73698 from anti-human IL-17 antibody AIN457; and a light chain variable region (LH) comprising CDR1, CDR2 and CDR3 ABF73699-ABF73699 from AIN457. The IL-17 binding molecule is preferably comprising after comprising after the first domain having anno acid sequence homology to the AIN457 VL region ABF73695. Also provided are a DNA construct encoding the IL-17 binding molecule by culturing a transformed host cell line. The LI-17 binding molecule is used to manufacture; especially crecarchritis, rheumatoid arthriting a transformed host cell line. The treatment of an IL-17 mediated disease or disorder, especially arthritides. In an example from the invention, transgenic mouse 27340, which is engineered to express the human IGG/Asppa repertoire antibodies to the murine immunorlobulin repertoire, was used to generate antibodies to the murine immunoglobulin repertoire, was used to generate antibodies to human IL-17. B-cells from these mice were immortalized by standard hybridoma technology and murine hybridoma cells were obtained which secreted the human IgG1/kappa antibody AIN457. The present sequence is ;

This is the amino acid

comprising the nucleic acid or expression vector. The composition (including the antibody) and methods are useful for manufacturing a medicament for treating a painful disorder (e.g. acute pain, dental pain, or pain from trauma or cancer), or a condition associated with increased expression of NGF or increased sensitivity to NGF. This is the amino acid sequence of a human NGF antibody light chain variable region.

The invention describes an isolated human antibody that interacts with or binds specifically to human nerve growth factor (NGF) and neutralize the function of NGF. Also described are: methods of treating a condition caused by increased expression of NGF or increased sensitivity to NGF in a patient; methods for detecting NGF in a biological sample; an NGF in a patient; methods for detecting any of the 59 amino acid sequences comprising, for e.g. 123, 107 or 14 amino acids, as mentioned in the specification, and where the binding agent can bind to NGF, a pharmaceutical composition comprising a pharmaceutical carrier and a therapeutic amount of the antibody or binding agent cited above; or a medicament for treating a painful disorder or condition associated with increased expression of NGF or increased sensitivity to NGF, the medicament comprising a pharmaceutical amount of a monoclonal antibody or its immunologically functional immunoglobulin fragment, or pharmaceutical carrier, diluent or excipient; a nucleic acid molecule or polynucleotide that encodes the above antibody or binding agent; an isolated cell line that produces the above antibody or binding agent; an isolated cell line that encodes the above antibody or binding agent; an

```
antibody is at least one of the monoclonal antibody cited above, and a pharmaceutical carrier, diluent or excipient; a nucleic acid molecule or polynucleotide that encodes the above antibody or binding agent; an isolated cell line that produces the above antibody or binding agent; an expression vector comprising the above polynucleotide; and a host cell comprising the nucleic acid or expression vector. The composition (including the antibody) and methods are useful for manufacturing a medicament for treating a painful disorder (e.g. acute pain, dental pain, or pain from trauma or cancer), or a condition associated with increased expression of NGF or increased sensitivity to NGF. This is the amino acid sequence of a human NGF antibody light chain.
of the monoclonal antibody or the fragment, where the monoclonal

Human monoclonal antibody or antigen-binding portion that specifically binds to c-Met, useful for treating cancer by inhibiting c-Met or for promoting tissue regeneration and wound healing by activating c-Met.

Example 2; SEQ ID NO 18; 128pp; English.

The invention relates to a human monoclonal antibody (I) or its antigenbinding portion that specifically binds to c-Met, comprises a heavy chain having a fully defined sequence (SI) of 13.3.2 heavy chain, where X2 is

Region

lysine and X4 is threonine, and a light chain having a fully defined sequence (\$2) of 13.3.2 light chain, where X8 is threonine, where both chains are without a signal sequence. All the sequences are fully defined in the specification. (I) is useful for the manufacture of a medicament for treating a hyperproliferative disorder in a subject, where the manufacture of a medicament for promoting wound healing or tissue regeneration in a subject, where the antibody, antigen-binding portion or regeneration activates c-Met. (I) which has a c-Met agonist activity is useful in tissue regeneration or wound healing (skin ulcers or gastric ulcers), or treating ischemia associated with kidney transplant regeneration for treating ischemia associated with kidney transplant curgery, for treating myocardial infarction, cardiac rejection, for attenuating toxicity associated with cardiac ischemia due to reperfusion injury, restenosis after angloplasty or vascular diseases. (I) which has a c-Met antagonist activity is useful contexting and arthritis, for inhibiting plaque for treating cancers of brain, lung, squamous cell, bladder, neck, liver, prostate, etc., proliferative vitrecentinopathy, proliferative diabetic responses, or for treating tumor, glioblastoma, sarcomas, or carcinomas. (I) is useful for detecting c-Met in a biological sample in vitro or in vivo, thus useful for dangenesting c-Met in a biological sample in vitro or in vivo, thus useful for dangenesting c-Met in a biological sample in vitro or in vivo, thus useful for datecting c-Met in a biological sample in vitro or in corresponds to the amino acid sequence for a germline antibody light BIVLTQSPGTLSLSPGERATLSCRASQSVSSSYLAWYQQKPGQAPRLLIYATSSRATGIP 60 21 EIVLTQSPGTLSLSPGERATLSCRASQSVSSSYLAWYQQKPGQAPRLLIYGASSRATGIP 80 Gaps . 0 61 DRFSGSGSGTDFTLTISRLEPEDFAVYYCQQYGSSPCSFGQGTKLEIK 108 DRFSGSGSGTDFTLTISRLEPEDFAVYXCQQYGSSPYTFGQGTKLEIK 128 95.9%; Score 535; DB 9; Length 128; 96.3%; Pred. The antibody of the invention demonstrates cytostatic activity and may be useful for treating a tumour, as colorectal neoplasm, renal cell carcinoma, cervical intraepithelial squamous and glandular neoplasia, osesophageal tumour or breast cancer, possibly via gene therapy. The current sequence is that of a murine-expressed anti-human CA IX monoclonal antibody VL (light chain variable domain) protein of the invention. The protein was generated via the introduction of the human CA IX protein into
                                                                                                                                                                                                                                                                                                                                                                    New anti-CA IX monoclonal antibody, useful for treating a tumor e.g., colorectal neoplasms, colorectal tumors, cervical carcinoma, cervical intraepithelial squamous and glandular neoplasia or esophageal tumors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          EIVLTQSPGTLSLSPGERATLSCRASQSVSSSYLAWYQQKPGQAPRLLIYATSSRATGIP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      용
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      other F105 Vk sequences given elsewhere in the specification) was compared with germline gene Humvk325 (AAQ42706), showing 97.7% similarity. By nucleotide sequence analysis, F105 appears to be derived from a member of the Vk III subgroup gene family. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DNA segments encoding monoclonal antibody - which binds to gp120 and neutralises HIV, for treating AIDS, and for diagnosing and monitoring HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   monoclonal antibody; carbonic anhydrase IX; CA IX tumour antigen; cytostatic; colorectal neoplasm; renal cell carcinoma; cervical intraepithelial squamous neoplasia; cervical intraepithelial glandular neoplasia; oesophageal; breast cancer; gene therapy; murine; mouse; human; light chain variable domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9

myasthenia gravis, muscular-gen.; neuroprotective; Crohns disease, antiinflammatory; gastrointestinal-gen.; nephritis; nephrotropic; gentrointestinal-gen.; nephritis; nephrotropic; gentrourinary disease; primary biliary cirrhosis; hepatotropic; panoreatitis, allergy; antiallergic, contact dermatitis; dermatological; delayed hypersensitivity; inflammatory bowel disease; septic shock; antibacterial; infection; osteopothosis; osteopathic; degeneration; endocrine disease; musculoskeletal disease; osteoarthritis; antiarthritic; osteopathic; musculoskeletal disease; cognitive disorder; noncropic; hereditary hemorrhagic telangisctssia; vasotropic; restenosis; fungal infection; fungicide; parasitic infection; antiparasitic; viral infection; cytomegalovirus infection; virucide. vascular endothelial growth factor receptor-1 for treating cancers and angiogenic-related disorders, e.g. atherosclerosis. New isolated human monoclonal antibody that binds specifically to sclerosis; neuroprotective; neurological disease; Claim 6; SEQ ID NO 15; 82pp; English. 18-NOV-2004; 2004US-0628815P. Bohlen P; 18-NOV-2005; 2005WO-US041904 (IMCL-) IMCLONE SYSTEMS INC WPI; 2006-373517/38. Hicklin DJ, N-PSDB; AEH89260. WO2006055809-A2 Homo sapiens. 26-MAY-2006.

Sequence 130 AA; Mikayama T, The invention relates to an isolated human monoclonal antibody or fragment that binds specifically to vascular endothelial growth factor creceptor—1 (VEGRE-1) and comprises a light chain complementarity determining region—2 (CDR2) of 7 amino acids (SEQ DNO: 2; see AEH89240) and a light chain CDR3 of 9 amino acids (SEQ DNO: 3; see AEH89241). Also cincluded are: an isolated polymucleotide comprising a nucleotide sequence encoding an antibody or its fragment; an isolated polymucleotide sequence encoding an antibody or its fragment that specifically binds to VEGRE-1; an expression vector comprising the oplymucleotide sequence encoding an antibody or its fragment that specifically binds to VEGRE-1; an expression vector comprising the oplymucleotide sequence linked to an expression vector comprising the expression vector comprising the expression vector is method of producing an an antibody or its fragment; a method of modulating activity of VEGRE-1 in a mammal; a method of inhibiting angiogenesis in a mammal; and a method of reducing tumor growth in a mammal; and a method of angiogenesis and reduce tumor growth in a mammal. The antibody is used to inhibit angiogenic-related disorders (e.g. atherosclerosis, rheumatoid arthritis, angiogenic-related disorders (e.g. atherosclerosis, rheumatoid arthritis, psoriasis, retinopathy of prematurity (retrolental fibroplastic), corneal constants, acute panoreatitis, allogeneration, hemangiomas, angiofibromas, graft rejection, insulin-dependent diabetes mellitus, multiple sclerosis, mysthemia gravis, crothard degeneration, hemangiomas, angiofibromas, graft rejection, insulin-dependent diabetes mellitus, multiple sclerosis, mysthemia gravis, contact dermaturity (retrolental fibroplastic), corneal contact dermaticis and delayed hypersensistivity creating and elayed hypersensistivity contact dermaticis and delayed hypersensistivity. reactions, inflammatory bowel disease, septic shock, osteoporosis, osteoarthritis, cognition defects induced by neuronal inflammation, Osler-Weber syndrome (hereditary hemorrhagic telangiectasia), restenosis, and fungal, parasitic and viral infections, including cytomegaloviral infections). The present sequence represents anti-VEGFR-1 antibody light chain variable region SEQ ID NO:15. Score 533; DB 10; Length 120; Pred. No. 4e-33; 2; Mismatches 3; Indels 95.5%; Scor 95.4%; Pred

The invention relates to an antibody to human CD40, or its functional fragment, has at least one of the following properties: acting on dendritic cells to produce IL-12 in the presence of LPS (lippolysaccharide) and IFNgamma (interferon gamma); acting on dendritic cells to activate maturity of the dendritic cells with high G28-5 antibody; and activating CD95 expression with high G28-5 antibody against B cell line. Such antibodies or functional fragments can be used as immunoactivators, anti-tumour agents, immunosupperssants, and as remedies for autoimmune diseases, allergy or coaquilation factor VIII inhibitors syndrome. This sequence represents a protein relating to the anti-CD40 monoclonal antibody of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

Novel anti-CD40 antibody having heavy chain constant region of human immunoglobulin G4 including substitution of arginine at specific position by lysine, threonine, methonine or leucine, useful in treating autoimmune disease and cancer.

Example 1; SEQ ID NO 8; 47pp; Japanese

The invention relates to an antibody comprising heavy chain constant region of human immunoglobulin G4 (1gG4). The antibody being anti-CD40 antibody is useful as therapetric agent of transplant rejection, autoimmune disease, cancer, arteriosclerosis, nephritis, Alzheimer's disease or amyloidosis. The antibody is useful for treating transplant rejection, autoimmune disease (e.g. inflammatory bowel disease, Crohn's cisease and ulcerative colitis), systemic lupus erythematosus (SLS), idiopathic thrombocytopenic purpura (ITP) multiple sclerosis, psoriasis, remembrism, cancer (e.g. lung cancer, colon cancer, bladder cancer, breast cancer, liver cancer, prostatic cancer, bladder cancer, breast cancer, bracker cancer, inver cancer, prostatic cancer, bladder cancer, broater cancer, prostatisms suppressed aggregation formation, and is highly stable mutant of 1gG4 antibody. The antibody exhibits decreased aggregate formation in low PH, and maintains binding controlled antibody dependent cell-mediated cytotoxicity and/or controlled antibody dependent cell-mediated cytotoxicity and/or controlled antibody dependent cell-mediated cytotoxicity and/or controlled antibody dependent cell-mediated cytotoxicity such in mumnoglobulin G4 (1gG4) antibody related protein. Note: The complement dependent cytotoxicity. The present sequence represents a chuman immunoglobulin G4 (1gG4) antibody related protein. Note: The sequence date for this pacent was obtained in electronic format directly from WIPO at ftp.wipo.int/published\_pct\_sequences.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Note: the sequence of the C region, which has the Inv (3) marker, is also given C; Comment: This is a Bence Jones protein.
C; Comment: This is a Bence Jones protein.
C; Comment: GDB: 136266
A; Map position: 2p12-2p11
C; Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap hain disulfide bonds: In some cases, such as IgA and IgM, the subunits associate into la C; Superfamily: immunoglobulin V region; immunoglobulin homology
C; Keywords: heterotetramer
F; 16-91/Domain: immunoglobulin homology <IMM>F; 23-89/Disulfide bonds: #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                           Sequence 150, Application US/08488113B
Patent No. 5744580
GENERAL INFORMATION:
APPLICANT: Better, Marc D.
APPLICANT: Studinks, Gary M.
TITLE OF INVENTION: Immunotoxins Comprising Ribosome-Inactivating TITLE OF INVENTION: Proteins
NUMBER OF SEQUENCES: 169
CORRESPONDENCE ADDRESS:
ADDRESSEE: McAndrews, Held & Malloy, Ltd.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                  US-10-665-383-4
